Low Fire Hazard Ducting Systems

In an internet reliant world, the fastest broadband speed is integral to every city, business and home. Whether it's for large data centres or internet browsing the highest speeds are crucial. With this ever growing demand, there has been a surge in FTTx applications and even more so with fibre to the home and premises. Radius has developed a Low Fire Hazard microducting solution for in-building fibre deployment.

Radius Low Fire Hazard microducting meets the relevant European Standards such as EN 13501-1:2007-05 and more. Our range also includes reduced fire hazard connectors, all our microducting is developed at our engineering headquarters by leading innovators in their field.

Low Fire Hazard ducting provides a secure pathway for mini fibre optic cables and is produced from fire retardant materials designed for low smoke emission and containing no halogens (LSZH - Low Smoke Zero Halogen materials). All Radius microducts feature permanent low friction solid inner lining which ensures optimal blowing distances.

Safety First

LFH single tubes and LFH bundles are **CE marked** and is fully compliant with LVD 2014/35/EU. Attention to public safety is paramount, that's why we've sought and achieved these standards. Radius LFH microduct is one of the highest rated in the European market, it's certified to B2: s1: d2: a1 standard. The microduct can be supplied as single loose tubes or as sheathed assemblies of various configurations. Radius LFH microducting is the perfect combination of safety, optimal blowing distance and ease of installation.

Why Choose Radius LFH Ducting?

- For applications in buildings and man entry tunnels
- Low flammability and not flame spreading
- B2: s1:d2:a1 performance rated
- CE marked
- UL riser approved* Reference QAZD7.E308689
- High quality with low friction inner lining
- Longer blowing distances & quicker installation
- Future proof your network
- Comprehensive range, single & multiduct assemblies up to 24 way

(*1 to 24 way x 5/3.5 mm)

Low Friction Inner Lining

A solid layer of lubricant is evenly distributed on the inner wall by co-extrusion providing a **permanent low friction** surface which lasts for the life of the duct. Low friction values allow quicker installation and optimal blowing distances. Radius microduct offers superior blowing performance in this market.

High Performance LSZH Material

Radius LFH microducting is manufactured to the highest standards, with **prime Low Smoke Zero Halogen material** that has been tested and approved to B2: s1: d2: a1 standard. As a result this reduces the amount and density of the smoke as well as toxic and corrosive gasses which are emitted during the combustion process.

DIN EN 13501-1

Fire classification of construction products and building elements - Part 1: Classification using data from reaction to fire tests. Certified and approved to B2:S1:D2:A1 standard..

This classification is comprised of the results of the following standards and independently tested by BASEC:

EN 50399:2011 + A1:2016

Common test methods for cables under fire conditions. Heat release and smoke production measurement on cables during flame spread test.

EN 60332-1-2:2004 + A11:2016

Tests on electric and optical fibre cables under fire conditions test specified in IEC 60332-1-2. Test for vertical flame propagation for a single insulated wire or cable. Procedure for 1 kW pre-mixed flame.

EN 61034-2:2005 + A1:2013

Measurement of smoke density of cables burning under defined conditions. Test procedure and requirements.

EN 60754-2:2014

Test on gases evolved during combustion of materials from cables. Determination of acidity (by pH measurement) and conductivity.

EN 61386-22

Conduit systems for cable management - part 22. The test methods in this standard are required for product CE marking. There are various tests including compression testing, bend tests and tensile tests which categorise the performance of the LFH ducting.

UL Riser 1666

Test for flame propagation height of electrical and optical fibre cables installed vertically in shafts. The purpose of this test is to determine whether the flame propagation characteristics of these “riser” cables are in accordance with the national electrical code.

- 2.2 No terms or conditions endorsed upon, delivered with or contained in the Purchaser's purchase order, confirmation of order, specification or other document will form part of the Contract simply as a result of such document being referred to in the Contract.
- 2.3 These Conditions apply to all the Company's sales and any variation to these Conditions and any representations about the Goods shall have no effect unless expressly agreed in writing and signed by an authorised representative of the Company. Nothing in this Condition will exclude or limit the Company's liability for fraudulent misrepresentation.
- 2.4 Each order for Goods by the Purchaser from the Company shall be deemed to be an offer by the Purchaser to purchase Goods subject to these Conditions.
