Rope Blowing Tee

Description

The Rope Blowing Tee is a product designed for installing draw ropes into cable ducts.

The Rope Blowing Tee is connected to the inlet of a Pipe Stopper (supplied separately), and then connected to the airline from a pneumatic compressor.

The draw rope or tape, is then fed through the hole in the end of the Rope Blowing Tee and attached to a Line Blowing Dart or Foam Pig. After which the Stopper is inserted into the duct, where it must be suitably braced, before the air supply is turned on. The draw Rope can now be fed into the duct.

Rope Blowing Tees are available to suit all sizes of Pipe Stoppers, which generally have either ½" or 1" outlets.
